# Dependencies

This section constitutes the Software Reuse File for the Global Fish Tracking Software (GFTS) DestinE Platform use case.

The list will continuously be updated and expanded as the project progresses. Currently the project has only Python dependencies at the first level. We are expecting to add Javascript dependencies as soon as the interface development begins.

## Python

The first level python dependencies are listed in the following file on GitHub.

[https://github.com/destination-earth/DestinE\\_ESA\\_GFTS/blob/main/.binder/environment.yml](https://github.com/destination-earth/DestinE_ESA_GFTS/blob/main/.binder/environment.yml)

## Javascript

To be determined.
